Computing: A Brave New World?

January 8, 2013

What is a computer?

Oxford English Dictionary:

“A calculating-machine; especially an automatic electronic device for performing mathematical or logical operations”

A tropical beach scene with a forested hillside, a sandy beach, and the ocean with large rocks in the foreground.

What is a computer?

I say:

“An algorithmic information processor”

Every answer creates more questions ...

What does “algorithmic” mean?

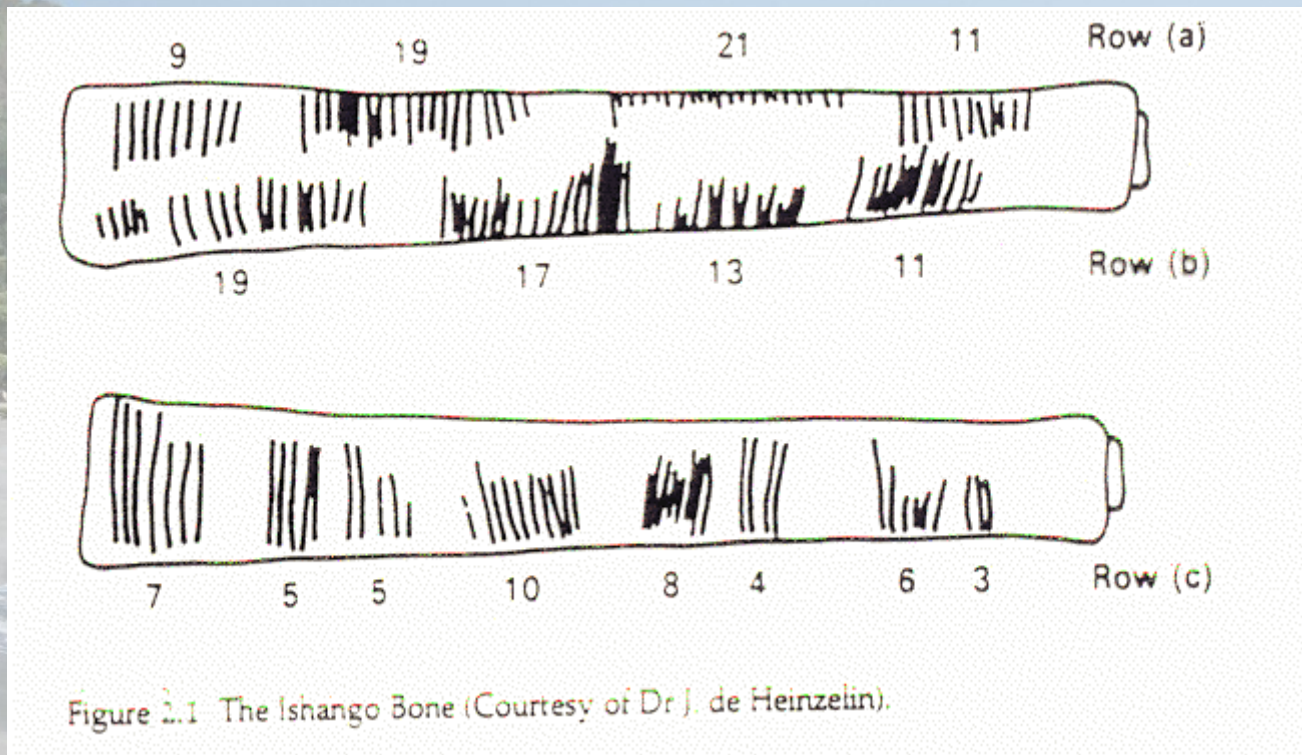

What does “information” mean?

What does “processor” mean?

Let's go back to the beginning ... the very beginning ...

23,000 BC - The Bone of Ishango

5000 BC - The Abacus

5000 BC - The Abacus

... still widely used

800 AD - Al-Khwarizmi (c. 780 - c. 850)

wrote books about astronomy, geography,
algebra

“algorithm” is derived from his name

1200 - Leonardo di Pisa

- better known as “Fibonacci”

- brought Al-Kwharizmi’s work to
Europe

- algebra slowly replaced the abacus

The Mechanical Age

A tropical beach scene with a forested hillside, palm trees, and a rocky coastline under a clear blue sky. The text is overlaid on the image.

c. 1600 - John Napier (1550 - 1617)

discovered logarithms

invented Napier's Bones

1621 - The Slide Rule

- invented

by William Oughtred

- thrived until 1970, when electronic calculators were first sold

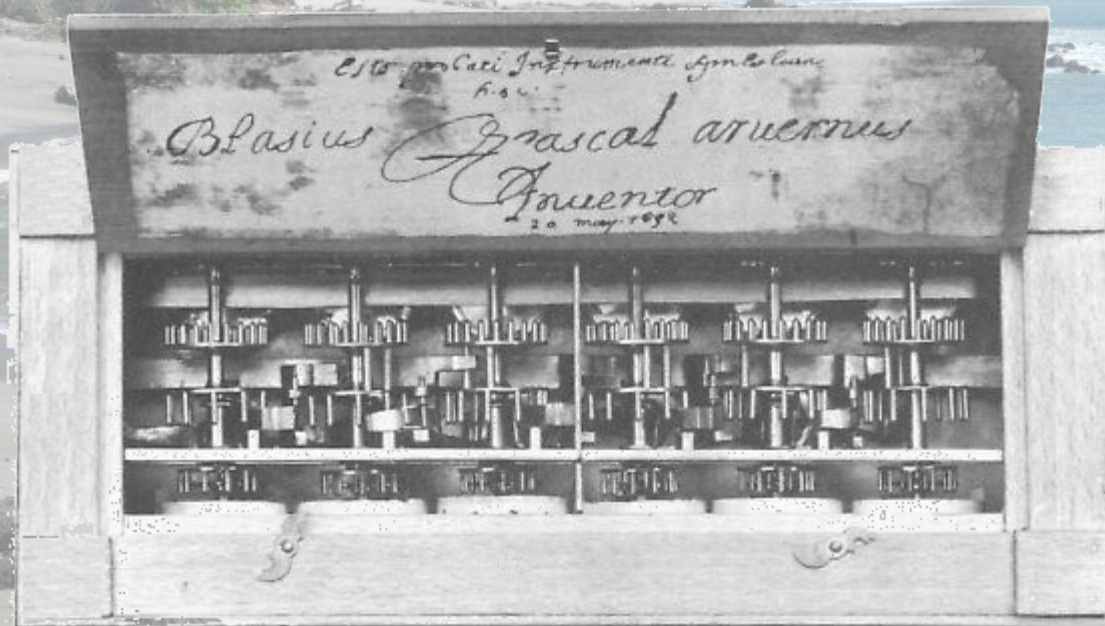

1642 - The Pascaline

- invented by Blaise Pascal
- basically a clockwork adding machine

1642 - The Pascaline

- about 50 were built, only 8 survive
- they tended to break down all the time

1673 - The Multiplier

- invented by Leibniz
- improved on Pascal's design ...

- but they tended to break down all the time

1804 - Programmable Loom

- invented by Jacquard
- used punched cards to raise and

lower the threads on
the loom

- worked quite well!

1822 - Difference Engine

- invented by Babbage

1822 - Difference Engine

- broke down all the time

Babbage also ...

- invented a system to monitor rails
- designed lights for marine communications
- designed an ophthalmoscope
- created a pen for drawing dotted lines

Babbage also ...

- designed footwear for walking on water
- designed tugboats and submarines
- designed a diving-bell
- designed an altimeter
- designed a seismograph

A tropical beach scene with a sandy shore, turquoise water, and a forested hillside in the background. The text is overlaid on the image.

Babbage also ...

- designed a hydrofoil
- designed a railway decoupler
- designed inter-city speaking tubes
- designed cow-catchers for trains

1887 - Census Machine

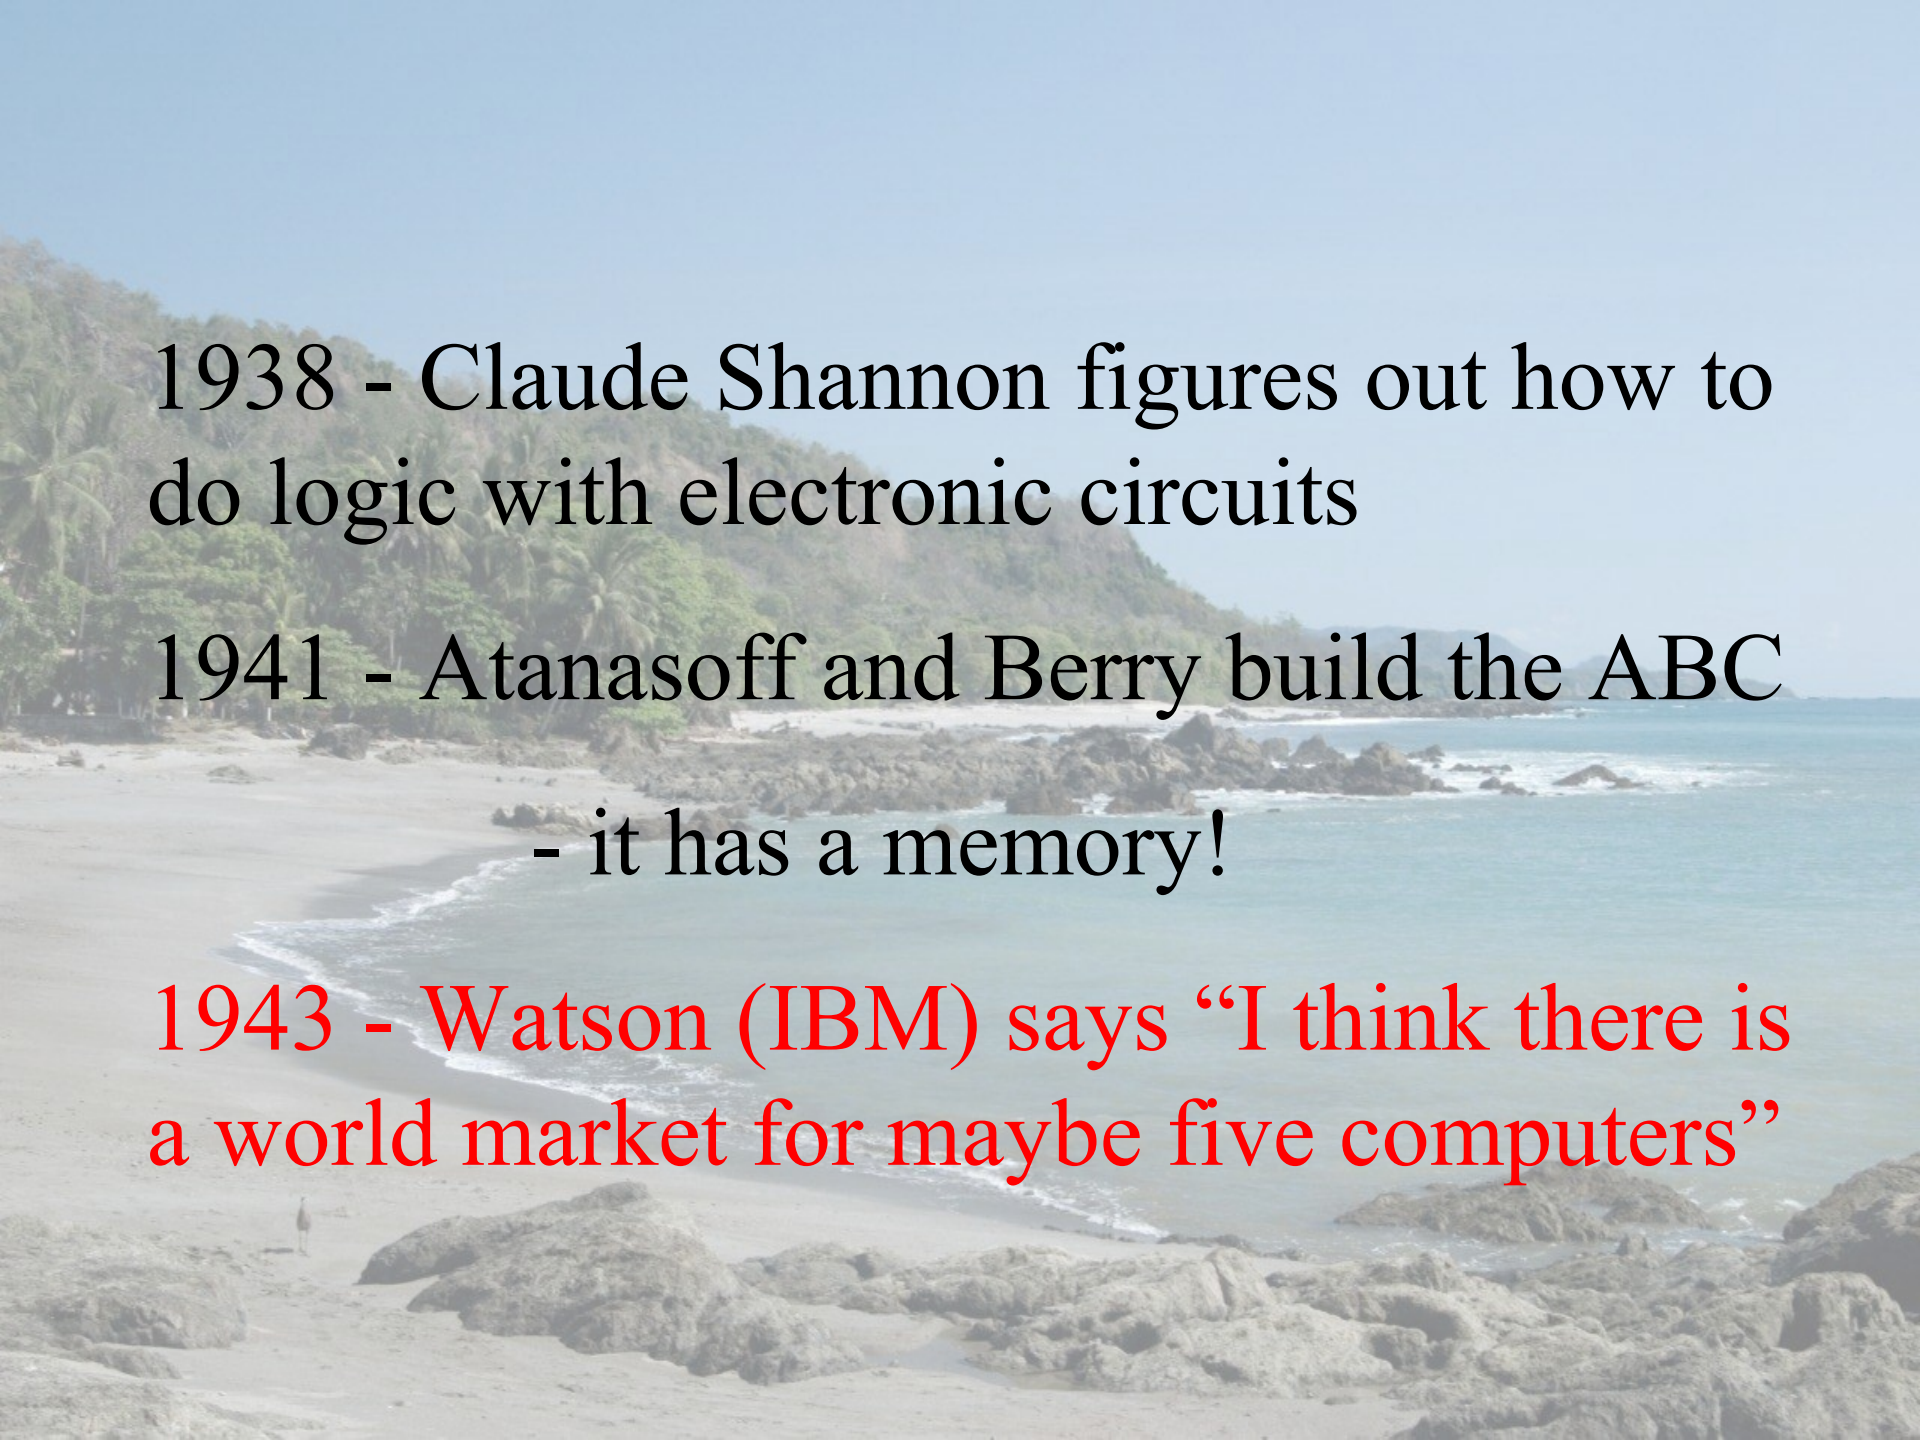

- invented by Herman Hollerith
- used punched cards *and electricity*
- Hollerith founded the company that became IBM in 1924

Electronic Computing

1906 - De Forest invents the vacuum tube

1937 - Turing defines mathematical theory of computing

1938 - Claude Shannon figures out how to do logic with electronic circuits

1941 - Atanasoff and Berry build the ABC
- it has a memory!

1943 - Watson (IBM) says “I think there is a world market for maybe five computers”

1943 - Collosus, first programmable electronic computer

- built by a team including Turing
- sole purpose: crack enemy codes
- 10 built, all destroyed after the war

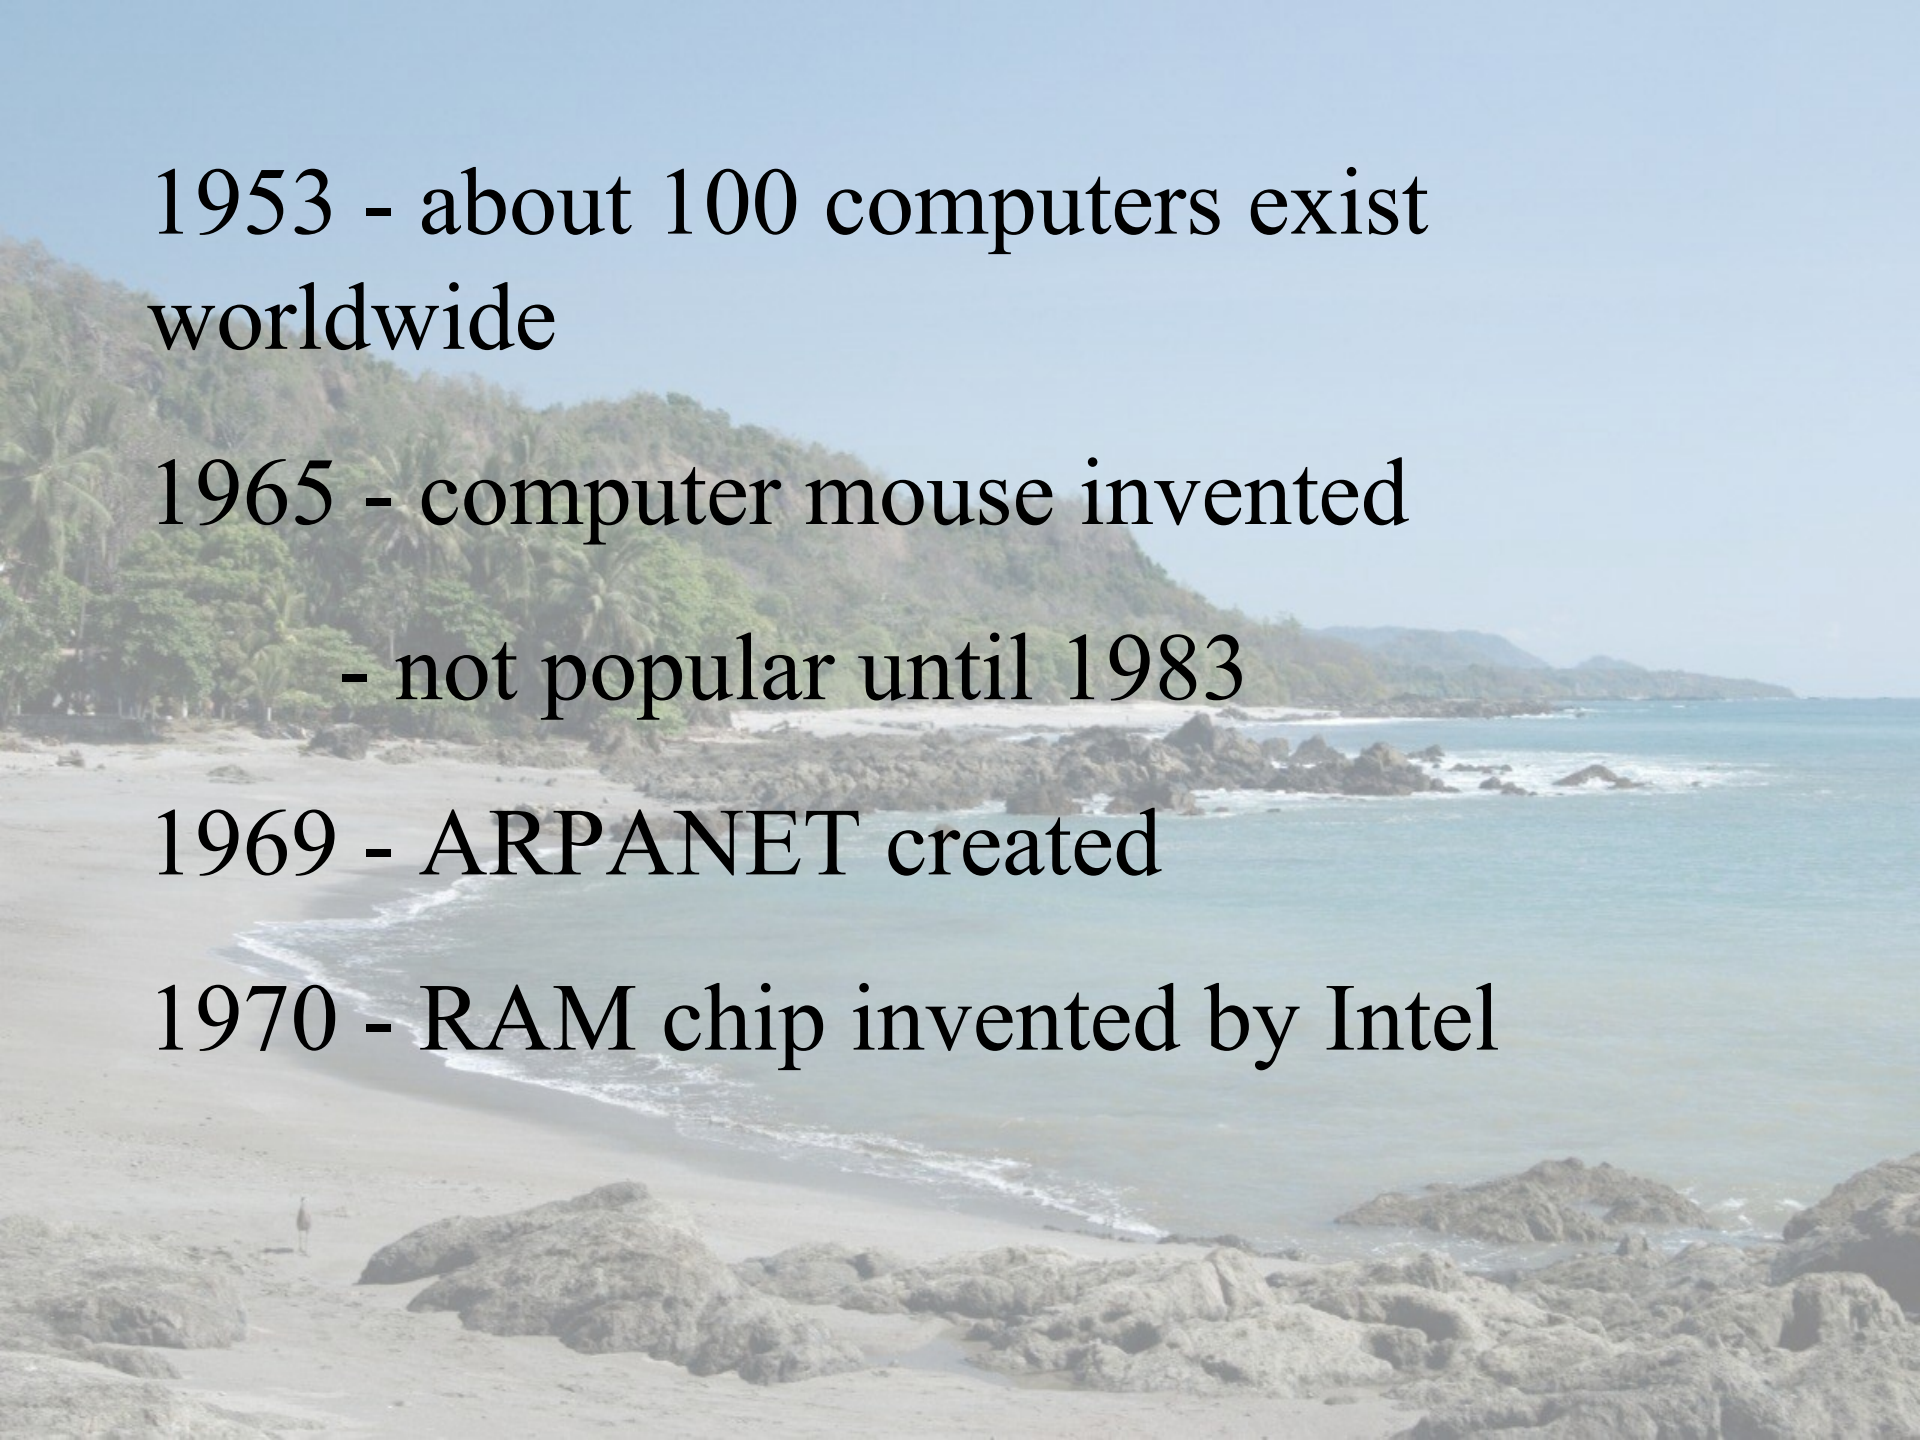

1947 - transistor invented by Bell Labs

1948 - Norbert Wiener coins “cybernetics”

1950 - floppy disk invented by Nakamats

1950 - Turing formulates the “Turing Test”

1951 - Univac, the first general purpose computer

1953 - about 100 computers exist worldwide

1965 - computer mouse invented

- not popular until 1983

1969 - ARPANET created

1970 - RAM chip invented by Intel

1971 - Microprocessor invented, Intel

1975 - Microsoft founded

1977 - “There is no reason anyone would want a computer in their home” - founder of Digital Electronics Corporation

1981 - “640K ought to be enough for anybody” - Bill Gates

1985 - Windows launched

1989 - WWW created, Berners-Lee

1993 - Individual access to WWW permitted

- use grows 300,000% in ONE YEAR

1994 - Netscape released

1997 - Deep Blue beats Kasparov

2000 - Unbreakable cryptography becomes public

2013 - At least 1,000,000,000 personal computers in use
